

Telecom Reseller

Vertical SBX

Vertical Communications, provider of next-generation IP-based phone systems and voice applications, announced significant enhancements to the SBX IP 320, a converged system developed in partnership with LG-Nortel. Release 2.0 provides new voicemail and auto-attendant features, increased voicemail storage and a cordless digital telephone. It is a small business system that incorporates enterprise-class features, VoIP, CTI, conferencing, soft-phone support and multi-site networking.

New features include:

- Park and Page allows a caller reaching a mailbox to select an option to be placed into a system park zone and have the mailbox user paged.
- Company Directory allows a caller to spell the name of a subscriber and be directed to her extension.
- Multiple mailbox buttons – work group members may assign voice mailbox buttons on their phones to assist in processing each others' messages
- IP phones can initiate and receive paging announcements.

"After learning the capabilities of other telephone systems it was clear that the SBX was the solution to fit our company's communications requirements," said Rodney Bearden, President of Carpet Universe Mills. "It is an excellent choice for businesses with one or more locations. It has an impressive list of features, more than we expected in one compact, affordable system.

With plans to expand our network using IP, we're excited to know our investment will allow us to easily add remote distribution centers located throughout the country."

"Release 2.0 is the result of a cooperative development effort with our channel partners and customers to identify and deliver new high-value features," said Peter Bailey, Sr. Vice President of Product Management. "The combination of features, VoIP support, simple install tools and price-point make it a good choice for small businesses." ☎
